RESEARCH SNAPSHOT

Personalized anchors

Lucy S2 confirmed. Jingran-luno is a focus team.

Other sequences and signature ownership are not assumed.

Start with the team.

Choose a role, build its required stats, then refine damage. Click any profile below to jump to it.

Iuno Aero / Gauntlets	05	Rebecca Electro / Pistols	14
Lynae Spectro / Pistols	06	Shorekeeper Spectro / Rectifier	15
Mornye Fusion / Broadblade	07	Luuk Herssen Spectro / Gauntlets	16
Denia Fusion / Rectifier	08	Chisa Havoc / Broadblade	17
Qingxiao Aero / Sword	09	Hsin Electro / Rectifier	18
Yangyang: Xuanling Havoc / Sword	10	Aemeath Fusion / Sword	19
Hiyuki Glacio / Sword	11	Suisui Glacio / Rectifier	20
Jingran Fusion / Broadblade	12	Changli Fusion / Sword	21
Lucy Spectro / Pistols	13	Verina Spectro / Rectifier	22

Also in this report

- 23 – Jingran / Iuno teaching rotation
- 24 – Build checkpoints
- 25–26 – Sourcebook and linked guides

Working assumptions

The list is treated as your requested/planning roster, not proof that every character or weapon is owned. Lucy is S2; other builds default to S0. Iuno S2 remains a potential upgrade. “Yangyang:SP” means Yangyang: Xuanling; “Luuk” means Luuk Herssen. Shorekeeper appears once.

“Best” means a strong, coherent team under the stated role and roster constraints—not a universal ranking for every enemy, sequence or rotation. ER ranges are starting points, not guarantees.

Four cores. No shared units.

A practical allocation for the requested roster—not a claim that every row is individually best-in-slot.

01 Jingran + Iuno + Shorekeeper

HEAVY ATTACK CORE

Keep Iuno's direct Outro and shield-domain interaction intact. [08P] [01P] [11P]

02 Qingxiao + Denia + Mornye

TUNE STRAIN CORE

Denia uses the Tune Strain preset; Mornye gets the required Tune interaction. [05P] [04P] [03P]

03 Xuanling + Chisa + Suisui

NEGATIVE-STATUS CORE

Chisa takes Moonlit; Suisui supplies the healer/support set. [06P] [13P] [16P]

04 Lucy S2 + Rebecca + Verina

LUCY CORE / ALLOCATION FALLBACK

Verina frees Shorekeeper for Jingran. Rebecca remains with Lucy. [09P] [10P] [18P]

WHEN YOU WANT A DIFFERENT CARRY

Hiyuki. Use Hiyuki + Lynae + Suisui instead of the Xuanling core. Lucilla is an outside-list specialist option. [07P]

Luuk. Replace Qingxiao with Luuk while retaining Denia + Mornye. These are alternative teams, not simultaneous copies. [12P]

Aemeath. Choose Denia + Chisa for Fusion Burst, or Lynae + Mornye for Tune Rupture. Reassign those supports deliberately. [15P]

Hsin / Iuno carry. Hsin adds Electro Rover outside the requested list. Carry Iuno uses Lynae + Mornye and cannot simultaneously support Jingran. [14P] [01P]

Allocation is an editorial recommendation. Select the teams you enjoy and use, then spend on those complete cores before developing another partially equipped carry.

Avoid expensive build mistakes.

The key exceptions are written into each sheet. These rules explain how to apply them.

01 Costs are not slot order.

4-3-3-1-1 means one 4-cost, two 3-cost and two 1-cost Echoes. The active Echo can be a 3-cost: Denia's Voidwing Moth and Luuk's Twin Nova are important examples. Jingran is the major 4-4-1-1-1 exception. [\[04P\]](#) [\[12P\]](#) [\[08P\]](#)

02 Energy Regen is a total percentage.

"120% ER" means 120% shown or effective total, not +120% above baseline. Test at least two full rotations without relying on an opening energy refill. Shorekeeper and Mornye have explicit in-combat bonuses; do not count those twice. [\[11P\]](#) [\[03P\]](#)

03 The button and the damage tag can differ.

Luuk levels Liberation but builds Basic Attack damage. Luno's bow damage favors Liberation bonuses. A low-priority talent node does not mean the input is unimportant: Xuanling still needs her Skill to change stance. [\[12P\]](#) [\[01P\]](#) [\[06P\]](#)

04 Talents follow the job.

Unlock the Inherent Skills, then raise key talents to 8 before pushing the dominant ones to 10. The numbered lists usually optimize damage. Healers have an explicit sustain-first note; fixed buff percentages do not necessarily improve with talent levels. [\[03P\]](#) [\[11P\]](#) [\[16P\]](#)

05 Count temporary Crit Rate before farming more.

Several sets and weapons add Crit Rate during combat. Jingran, Hiyuki, Xuanling, Hsin and Aemeath need particular care. Shorekeeper adds another team Crit layer. Evaluate the buffed damage window, not only the idle screen. [\[08P\]](#) [\[07P\]](#) [\[06P\]](#) [\[14P\]](#) [\[15P\]](#) [\[11P\]](#)

06 "50% bonus" is not "50% more team damage."

Damage Bonus, Amplification and personal damage gains are not interchangeable. A support sequence may have a condition, an uptime limit or only affect one damage category. Favor functioning rotations before chasing headline percentages. [\[01P\]](#) [\[13P\]](#)

Source notation: P = Prydwen build/rotation analysis; W = Wutheringlab kit/build reference. Citations open the relevant guide. The sourcebook gives all 18 pairs. Recommendations labeled as allocation or investment advice are my synthesis for your roster.

AERO / GAUNTLETS

Iuno

Support / sub-DPS • optional on-field carry

Build her damage without losing Jingran’s buff handoff.

RECOMMENDED TEAMS

Your main use	Jingran + Iuno + Shorekeeper
Carry alternative	Iuno + Lynae + Mornye; Shorekeeper can replace Mornye

ECHO BUILD

Hybrid: 5-piece Moonlit Clouds + Impermanence Heron.
Damage/carry: 3-piece Crown of Valor + 2-piece Sierra Gale, with Lady of the Sea active.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Aero DMG + Aero DMG
1-costs	ATK% + ATK%
ER target	120-130% for hybrid play. Carry rotations may need less; test your team.
Substats	Energy Regen to target → Crit → Liberation DMG / ATK%

PLAY PATTERN

Intro → Closing Refrain → Liberation → switch to Moonbow → bow attacks and Skills → Absolute Fullness at full Concerto → Outro directly to Jingran.

Must know. Absolute Fullness creates the Full Moon Domain. Receiving shields inside it builds Blessing stacks; merely keeping one shield is not enough. S2 adds amplification only at 10 stacks. Switching the carry out loses key buffs.

For your roster: Moonlit and Crown can be close in total team output. Use the better complete set rather than treating either as universally superior.

Build, priorities and kit references: [\[01P\]](#) [\[01W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Forte Circuit
- 02 Resonance Liberation
- 03 Intro Skill
- 04 Resonance Skill
- 05 Basic Attack

Carry order: Forte → Liberation → Basic → Skill → Intro. Unlock Waxing Ascent and Derivation first.

WEAPONS

Signature: Moongazer’s Sigil. Alternatives: Verity’s Handle; Abyss Surges.

SPECTRO / PISTOLS

Lynae

General-purpose hybrid buffer

A flexible partner when the carry benefits from Liberation amplification.

RECOMMENDED TEAMS

Carry luno	luno + Lynae + Mornye
Glacio option	Hiyuki + Lynae + Suisui
Tune alternative	Qingxiao + Lynae + Mornye; Denia is the specialist alternative

ECHO BUILD

5-piece Pact of Neonlight Leap. Active Echo: Hyvatia.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Spectro DMG + Spectro DMG
1-costs	ATK% + ATK%
ER target	115-130%; around 125% is a practical starting point.
Substats	Energy Regen to target → Crit → ATK% → Basic Attack DMG

TALENT LEVEL-UP ORDER

- 01 Forte Circuit
- 02 Resonance Liberation
- 03 Basic Attack
- 04 Resonance Skill
- 05 Intro Skill

Start with Forte and Liberation at 8, then 10 as resources allow. The remaining levels are secondary.

WEAPONS

Signature: Spectrum Blaster. Accessible alternative: Static Mist.

PLAY PATTERN

Intro → Skill → Liberation → charged Spark Collision → three Polychrome Leaps → Visual Impact → Outro to the intended carry. Fit Hyvatia into setup.

Must know. Her Outro benefits the incoming character, so do not insert another teammate before the carry. S2 strengthens both Lynae and that recipient; it does not require changing her main Echo set.

For your roster: Keep her available as a flexible substitute rather than forcing her into teams already built around Rebecca, Denia or luno.

Build, priorities and kit references: [\[02P\]](#) [\[02W\]](#) • [Sourcebook](#)

FUSION / BROADBLADE

Mornye

DEF-scaling healer / Tune support

Her Energy Regen threshold matters more than conventional DPS stats.

RECOMMENDED TEAMS

Tune Strain	Qingxiao + Denia + Mornye; Luuk can replace Qingxiao
Carry Iuno	Iuno + Lynae + Mornye
Tune Rupture	Aemeath + Lynae + Mornye

ECHO BUILD

5-piece Halo of Starry Radiance. Active Echo: Reactor Husk. Rejuvenating Glow is a reusable fallback, not the default.

Costs	4-3-3-1-1
4-cost	DEF% (Healing Bonus for extra sustain)
3-costs	Energy Regen + Energy Regen
1-costs	DEF% + DEF%
ER target	260% effective; about 240% before the passive and Reactor Husk bonuses.
Substats	Energy Regen first → DEF% for healing; Crit DMG / Liberation DMG for damage

TALENT LEVEL-UP ORDER

- 01 Resonance Liberation
- 02 Forte Circuit
- 03 Basic Attack
- 04 Intro Skill
- 05 Resonance Skill

This is damage order. For healing, prioritize Forte and Skill. Most personal damage is in Liberation; other damage levels are optional.

WEAPONS

Signature: Starfield Calibrator. Excellent practical alternative: Discord.

PLAY PATTERN

Intro into Wide Field Observation → Skill → enhanced Basics → Inversion Heavy → Liberation to upgrade the field → Echo → Outro.

Must know. At S0, the full Interfered Marker package needs Tune Rupture or Tune Strain. S1 removes that restriction. Do not assume S0 Mornye gives her complete package to Lucy or every negative-status team.

For your roster: Reach the ER threshold and reliable Concerto first. Her Liberation gains substantial Crit Rate from ER, so ordinary Crit-stacking rules do not apply.

Build, priorities and kit references: [\[03P\]](#) [\[03W\]](#) • [Sourcebook](#)

FUSION / RECTIFIER

Denia

Two-mode hybrid / specialist buffer

Choose her mode and set together before spending tuners.

RECOMMENDED TEAMS

Tune Strain	Qingxiao + Denia + Mornye; Luuk + Denia + Mornye
Fusion Burst	Aemeath + Denia + Chisa

ECHO BUILD

Tune Strain: 5-piece Reel of Spliced Memories + Voidwing Moth.
Fusion Burst: 5-piece Chromatic Foam + Reminiscence: Denia.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Fusion DMG + Fusion DMG; one ATK% is viable
1-costs	ATK% + ATK%
ER target	Start near 120% in Fusion Burst or 125% in Tune Strain; refine after two loops.
Substats	Energy Regen to target → Crit → ATK% / Liberation DMG

PLAY PATTERN

Intro and resource-building attacks → reach 100 Void Particles → first Liberation → empowered attacks and Skills → second Liberation → Outro to the carry.

Must know. Voidwing Moth is a 3-cost active Echo; the 4-cost Crit piece remains elsewhere in the loadout. Casting the first Liberation before the resource condition can undermine the intended enhanced sequence.

For your roster: Do not copy the Fusion Burst set onto a Qingxiao or Luuk team. Keep separate saved presets when alternating between these roles.

Build, priorities and kit references: [\[04P\]](#) [\[04W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Resonance Liberation
- 02 Forte Circuit
- 03 Resonance Skill
- 04 Basic Attack
- 05 Intro Skill

Liberation is the first major investment. Upgrade Forte next; small differences among the lower priorities matter much less.

WEAPONS

Signature: Forged Dwarf Star. Permanent alternative: Cosmic Ripples.

AERO / SWORD

Qingxiao

On-field Tune Strain carry

Build the Tune Strain core, not just three individually strong characters.

RECOMMENDED TEAMS

Specialist core	Qingxiao + Denia + Mornye
Flexible alternative	Qingxiao + Lynae + Mornye
Support substitution	Shorekeeper can replace Mornye, with different buff coverage

ECHO BUILD

5-piece Heart of Evil's Purge. Active Echo: Calamity Effigy.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG, based on final combat stats
3-costs	Aero DMG + ATK%; double Aero also works
1-costs	ATK% + ATK%
ER target	Approximately 115-120% as a conservative starting range.
Substats	Energy Regen to target → Crit → ATK% → useful damage bonuses

PLAY PATTERN

Support setup → Denia or Lynae Outro → Qingxiao Intro → enhanced attack sequence → Judgement Skill → Heaven's Reckoning → Liberation → Echo and handoff.

Must know. His set and weapon are built around Tune Strain interactions. A well-built specialist hybrid is part of the damage engine, not merely an optional ATK buffer.

For your roster: Denia and Mornye are also contested by Luuk. Finish one of those teams first instead of trying to build both around the same supports for simultaneous use.

Build, priorities and kit references: [\[05P\]](#) [\[05W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Forte Circuit
- 02 Resonance Liberation
- 03 Basic Attack
- 04 Resonance Skill
- 05 Intro Skill

Forte and Liberation first. Add Basic levels before polishing low-impact Skill and Intro damage.

WEAPONS

Signature: Glint of Clouds. Permanent alternative: Emerald of Genesis.

HAVOC / SWORD

Yangyang: Xuanling

Heavy Attack carry • Yangyang:SP

This is the five-star Havoc version, not the original Aero Yangyang.

RECOMMENDED TEAMS

Primary recommendation	Xuanling + Chisa + Suisui
Listed-roster alternative	Xuanling + Rebecca + Chisa; competes with Lucy for Rebecca

ECHO BUILD

5-piece Song of Feathered Trace. Active Echo: Thousand-Puppet Pavilion.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG; account for the set's Crit Rate
3-costs	Havoc DMG + ATK% or Havoc DMG
1-costs	ATK% + ATK%
ER target	Start around 110-120%; increase if Liberation is late in your actual loop.
Substats	Energy Regen to target → Crit → ATK% / Heavy Attack DMG

PLAY PATTERN

Intro → Azure Basics → switch to Feather → Feather Heavy and plunge → Havoc in Bloom sequence → Liberation → switch back → Azure Heavy → Outro.

Must know. The set gives 20% Crit Rate during its active effect: count that before choosing a Crit main stat. Her enhanced attacks use Heavy Attack scaling even when the input looks like an ordinary attack chain.

For your roster: Use the normal stance cycle before learning double-Feather quickswap routes. Chisa and Suisui are your straightforward specialist support pairing.

Build, priorities and kit references: [\[06P\]](#) [\[06W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Forte Circuit
- 02 Resonance Liberation
- 03 Basic Attack
- 04 Intro Skill
- 05 Resonance Skill

Skill inputs remain essential for stance changes even though leveling the Skill node is low priority.

WEAPONS

Signature: Azure Oath. Permanent alternative: Emerald of Genesis.

GLACIO / SWORD

Hiyuki

Liberation / Glacio Chafe carry

Her talent order is not the usual “Forte first” pattern.

RECOMMENDED TEAMS

From your requested roster	Hiyuki + Lynae + Suisui
Alternative sustain	Hiyuki + Lynae + Chisa
Specialist outside your list	Hiyuki + Lucilla + Suisui

ECHO BUILD

5-piece Wishes of Quiet Snowfall. Active Echo: Reminiscence: Threnodian – Voidborne Construct.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG; include the set’s 25% Crit Rate
3-costs	Glacio DMG + Glacio DMG; one ATK% is close with signature
1-costs	ATK% + ATK%
ER target	About 120%, then test repeat rotations.
Substats	Energy Regen to target → Crit → ATK% → Liberation DMG

PLAY PATTERN

Intro → complete Dedication → special Heavy → first Liberation → build Frostheart → three lai attacks → Bitterfrost Heavy → finishing Liberation.

Must know. At S0, getting at least two Snow Rust stacks is important. Her own application plus a Glacio Chafe or Havoc Bane teammate supplies the key synergy; Suisui and Chisa are useful for more than healing.

For your roster: Lucilla is listed as an outside-roster premium option, not assumed owned. Lynae + Suisui is the practical team to build from your list.

Build, priorities and kit references: [\[07P\]](#) [\[07W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Resonance Liberation
- 02 Basic Attack
- 03 Forte Circuit
- 04 Resonance Skill
- 05 Intro Skill

Prioritize Liberation and Basic. Intro is an inexpensive place to save resources; Skill is secondary.

WEAPONS

Signature: Frostburn. Alternatives: Blazing Brilliance or Emerald of Genesis.

FUSION / BROADBLADE

Jingran

HP-oriented Heavy Attack carry

Build toward 50,000 HP before copying a generic ATK carry setup.

RECOMMENDED TEAMS

Your primary team	Jingran + Iuno + Shorekeeper
Allocation fallback	Jingran + Iuno + Verina; lower buff ceiling, frees Shorekeeper

ECHO BUILD

5-piece Lamp of Nether Road. Active Echo: Myriad Snare: Rustfire Chassis.

Costs	4-4-1-1-1
4-cost	Two Crit pieces when HP allows; replace one or both with HP% if needed
3-costs	None in the recommended 4-4-1-1-1 layout
1-costs	HP% + HP% + HP%
ER target	About 120% for the Iuno / Shorekeeper team.
Substats	Energy Regen → HP toward 50,000 → Crit → Heavy Attack DMG

TALENT LEVEL-UP ORDER

01	Forte Circuit
02	Resonance Liberation
03	Resonance Skill
04	Basic Attack
05	Intro Skill
Unlock Hark the Dust and Trace the Vestige. Target Forte 10, Liberation 10, then Skill 8-10.	
WEAPONS	
Signature: Thousandfold Deliverance. Radiance Cleaver is an alternative, but requires rebuilding the HP balance.	

PLAY PATTERN

Iuno Outro → Jingran Intro → Liberation before empowered Heavies → four Heavy finishers, rebuilding Qi between them → Outro back to support.

Must know. The 50,000-HP threshold feeds several offensive conversions. The signature’s large HP stat changes which 4-cost main stats work. Count the set’s Crit Rate, weapon effects and Shorekeeper before adding more Crit Rate.

For your roster: Do not swap out halfway through his buffed window. The detailed S0 teaching rotation is on page 23; higher sequences can change the opener.

Build, priorities and kit references: [08P] [08W] • Sourcebook

SPECTRO / PISTOLS

Lucy

Heavy Attack / Hack carry • your S2

Finish the Lucy–Rebecca core before treating another carry as mandatory.

RECOMMENDED TEAMS

Premium default	Lucy + Rebecca + Shorekeeper
No-overlap allocation	Lucy + Rebecca + Verina
Conditional alternative	Lucy + Rebecca + Mornye at S1 or higher

ECHO BUILD

1-piece Shadow of Shattered Dreams + 2-piece Celestial Light + 2-piece Eternal Radiance. Active Echo: Reminiscence – Nightmare: Adam Smasher.

Costs	4–3–3–1–1
4-cost	Crit Rate or Crit DMG
3-costs	Spectro DMG + Spectro DMG
1-costs	ATK% + ATK%
ER target	Around 125%; do not sacrifice repeatable Liberation for a prettier Crit ratio.
Substats	Energy Regen to target → Crit → ATK% → Heavy Attack DMG

PLAY PATTERN

Healer setup → Rebecca’s complete resource / Outro sequence → Lucy’s Hack and enhanced Heavy window → finisher → return to support.

Must know. Rebecca gives Lucy the fully ramped Heavy Attack amplification immediately. S2 adds a follow-up after Pulse Interference and strengthens SQL-related output. Keep the same core synergy rather than replacing Rebecca with a generic buffer.

For your roster: The one-piece Adam Smasher set is intentional. Do not replace it with a generic five-piece Spectro set merely to make the loadout look conventional.

Build, priorities and kit references: [\[09P\]](#) [\[09W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Resonance Liberation
- 02 Basic Attack
- 03 Forte Circuit
- 04 Resonance Skill
- 05 Intro Skill

Liberation and Basic are the first major levels. S2 does not require a different main-stat template.

WEAPONS

Signature: Spectral Trigger. Lux & Umbra is a strong existing-weapon alternative.

ELECTRO / PISTOLS

Rebecca

Lucy specialist / damaging hybrid

For your S2 Lucy, she deserves real offensive investment.

RECOMMENDED TEAMS

Primary assignment	Lucy + Rebecca + Shorekeeper or Verina
Alternate assignment	Xuanling + Rebecca + Chisa

ECHO BUILD

Team support: 5-piece Moonlit Clouds + Bell-Borne Geochelone.
Personal damage: 1-piece Shadow of Shattered Dreams + 2-piece Void Thunder + 2-piece Lingering Tunes, with Adam Smasher active.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Electro DMG + Electro DMG
1-costs	ATK% + ATK%
ER target	Roughly 120-130%; weapon and shortened loops change the requirement.
Substats	Energy Regen to target → Crit → Basic Attack DMG / ATK%

PLAY PATTERN

Intro → build and spend Fervor through enhanced attacks → final Heavy → Bell → Liberation → Outro directly to Lucy.

Must know. Bell's team damage buff can disappear after taking three hits. Cast it late. Her own damage favors Basic Attack bonuses even though the recipient wants Heavy Attack amplification.

For your roster: Use Moonlit for a straightforward Lucy support build. A strong offensive mixed set remains viable; compare complete team runs, not just Rebecca's damage number.

Build, priorities and kit references: [\[10P\]](#) [\[10W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Forte Circuit
- 02 Resonance Liberation
- 03 Basic Attack
- 04 Intro Skill
- 05 Resonance Skill

Forte and Liberation first. Leveling her does not increase the fixed percentages of her Outro buff.

WEAPONS

Signature: Skull Thrasher. Permanent alternative: Static Mist.

SPECTRO / RECTIFIER

Shorekeeper

HP healer / Crit and damage buffer

Reach effective ER, then choose healing comfort or personal damage.

RECOMMENDED TEAMS

- First assignment
- Jingran + Iuno + Shorekeeper
- Other strong uses
- Lucy + Rebecca + Shorekeeper; Iuno + Lynae + Shorekeeper

ECHO BUILD

5-piece Rejuvenating Glow. Active Echo: Fallacy of No Return.

Costs	4-3-3-1-1
4-cost	Healing Bonus for comfort; Crit DMG for enhanced Intro damage
3-costs	Energy Regen + Energy Regen; Spectro only after meeting the target
1-costs	HP% + HP%
ER target	250% effective: usually 230% before Fallacy and Self Gravitation, each adding 10%.
Substats	Energy Regen first → HP% for healing or Crit DMG for damage

TALENT LEVEL-UP ORDER

- 01 Resonance Liberation
- 02 Resonance Skill
- 03 Intro Skill
- 04 Forte Circuit
- 05 Basic Attack

Practical healing-first order. Once healing is adequate, prioritize Intro for damage. Crit buff strength comes from ER, not talent level.

WEAPONS

Signature: Stellar Symphony. Excellent practical alternative: Variation.

PLAY PATTERN

Build Concerto → Liberation → Fallacy near the handoff → Outro to hybrid → hybrid Outro to carry → return with enhanced Intro after the carry's window.

Must know. Two team Intros upgrade the field to its full Crit-buff stage. At S0, her enhanced Intro ends that field; S1 prevents this. S2's ATK buff is not a 40% increase to final team damage.

For your roster: Build a reliable healing set before pursuing Crit DMG. You listed Shorekeeper twice; this single profile covers both uses.

Build, priorities and kit references: [\[11P\]](#) [\[11W\]](#) • [Sourcebook](#)

SPECTRO / GAUNTLETS

Luuk Herssen

Basic Attack / Tune Strain carry

His Liberation is leveled as Liberation but deals Basic Attack damage.

RECOMMENDED TEAMS

Specialist core	Luuk + Denia + Mornye
Flexible alternative	Luuk + Lynae + Mornye

ECHO BUILD

5-piece Rite of Gilded Revelation. Active Echo: Twin Nova: Nebulous Cannon, a 3-cost Echo.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Spectro DMG + ATK%; double Spectro also viable
1-costs	ATK% + ATK%
ER target	Start at 125-130%; tighter tested rotations may use less.
Substats	Energy Regen to target → Crit → ATK% / Basic Attack DMG

TALENT LEVEL-UP ORDER

- 01 Resonance Skill
- 02 Resonance Liberation
- 03 Basic Attack
- 04 Forte Circuit
- 05 Intro Skill

Skill and Liberation are the important first pair. Basic Attack damage bonuses apply to his Liberation damage.

WEAPONS

Signature: Daybreaker's Spine. Strong permanent alternative: Pulsation Bracer.

PLAY PATTERN

Support Outro → Luuk Intro with Ichor Flow → enhanced Skill and aerial attack sequence → finishing Ichor plunge → Liberation → Outro.

Must know. Finish the Ichor sequence before the Liberation. Do not interrupt the carry window with an unnecessary swap. A 3-cost active Echo does not mean dropping the separate 4-cost Crit piece.

For your roster: Do not farm Liberation DMG substats just because the finishing button is Liberation. This team competes directly with Qingxiao for Denia and Mornye.

Build, priorities and kit references: [\[12P\]](#) [\[12W\]](#) • [Sourcebook](#)

HAVOC / BROADBLADE

Chisa

Negative-status hybrid / healer

Her set follows her team slot: hybrid buffer or sole healer.

RECOMMENDED TEAMS

Hybrid with another healer	Xuanling + Chisa + Suisui
Sole healer	Aemeath + Denia + Chisa
Hsin alternative	Hsin + Electro Rover + Chisa; Rover is outside the requested list

ECHO BUILD

With Suisui: 5-piece Moonlit Clouds + Impermanence Heron. As sole healer: 5-piece Rejuvenating Glow + Fallacy. Personal damage: 3-piece Thread of Severed Fate + 2-piece Havoc Eclipse, with Reminiscence: Threnodian – Leviathan.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Havoc DMG + Havoc DMG
1-costs	ATK% + ATK%
ER target	Around 125% or enough to Liberation every rotation.
Substats	Energy Regen to target → Crit → ATK% → Liberation DMG

PLAY PATTERN

Apply Unseen Snare → build Forte → Liberation → enhanced Skill / chainsaw sequence → Eradication → Outro to the damage dealer.

Must know. Her S2's 50% All-Attribute DMG Bonus requires Thread of Bane on the recipient. This is a negative-status condition, not a universal buff for arbitrary teams.

For your roster: Keep the full offensive stat template while supporting. Farm the personal-damage set only after the team's buffing and healing roles are covered.

Build, priorities and kit references: [\[13P\]](#) [\[13W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Forte Circuit
- 02 Resonance Liberation
- 03 Basic Attack
- 04 Resonance Skill
- 05 Intro Skill

Forte and Liberation first. Rejuvenating Glow does not automatically mean using an HP or Healing main stat.

WEAPONS

Signature: Kumokiri. Alternatives: Radiance Cleaver or Lustrous Razor.

ELECTRO / RECTIFIER

Hsin

Skill-damage carry • Flare / Unison modes

Use the live 3.7 build; old prerelease assumptions are not the baseline.

RECOMMENDED TEAMS

Current Flare core	Hsin + Electro Rover + Suisui
Alternative healer	Hsin + Electro Rover + Chisa
Roster limitation	Electro Rover is outside your requested list; do not replace this role at random

ECHO BUILD

5-piece Heart of Sworn Vigil. Active Echo: Reminiscence: Suhsin the Inevitable.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Electro DMG + Electro DMG; one ATK% is viable
1-costs	ATK% + ATK%
ER target	Start at 115-120%; optimized Flare loops may work around 110%.
Substats	Energy Regen to target → Crit → ATK% / Skill DMG

TALENT LEVEL-UP ORDER

- 01 Forte Circuit
- 02 Resonance Liberation
- 03 Basic Attack
- 04 Resonance Skill
- 05 Intro Skill

This is Flare order. Unison: Forte → Liberation → Intro → Basic → Skill.

WEAPONS

Signature: Blooming Jadehaven. Alternative: Lethean Elegy; Stringmaster is a stat-stick option.

PLAY PATTERN

Build Forte → Realm Protector Heavy → Formshift → enhanced combo and four Pillars → Stilling All Horizons → final Liberation. Use the route for your selected mode.

Must know. Heart of Sworn Vigil supplies 15% Crit Rate. Unison uses different entry and swap logic; a Flare rotation should not be copied unchanged into that mode.

For your roster: Build the Electro Rover support core first. Do not justify investment solely using projected Suoming teams or old beta damage-per-rotation comparisons.

Build, priorities and kit references: [\[14P\]](#) [\[14W\]](#) • [Sourcebook](#)

FUSION / SWORD

Aemeath

Liberation carry • two team modes

The damage build stays similar; the mode and support package change.

RECOMMENDED TEAMS

Tune Rupture	Aemeath + Lynae + Mornye
Fusion Burst	Aemeath + Denia + Chisa
Advanced fallback	Aemeath + Changli + Verina; not the specialist default

ECHO BUILD

5-piece Trailblazing Star. Active Echo: Sigillum.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG; count the set's Crit Rate
3-costs	Fusion DMG + ATK% or Fusion DMG
1-costs	ATK% + ATK%
ER target	Approximately 115-125%; about 120% is a useful starting point.
Substats	Energy Regen to target → Crit → ATK% → Liberation DMG

TALENT LEVEL-UP ORDER

- 01 Resonance Liberation
- 02 Forte Circuit
- 03 Resonance Skill
- 04 Basic Attack
- 05 Intro Skill

Liberation and Forte first. Treat the other three as later damage refinements.

WEAPONS

Signature: Everbright Polestar. Use an existing suitable five-star Sword rather than assuming every signature passive transfers.

PLAY PATTERN

Set the correct mode → support handoffs → open Liberation / enhanced state → alternate the required form attacks and build Duet → complete the finisher → Outro.

Must know. Match Denia's Fusion Burst mode and Chromatic Foam set to the Fusion Burst team. The Lynae / Mornye team instead exploits Tune mechanics. These are separate plans, not interchangeable rotations.

For your roster: Your Denia and Mornye assignments decide which version is available alongside Qingxiao or Luuk. Choose the full team before farming marginal upgrades.

Build, priorities and kit references: [\[15P\]](#) [\[15W\]](#) • [Sourcebook](#)

GLACIO / RECTIFIER

Suisui

HP healer / negative-status support

Her 260% ER threshold and relay timing are the essential investments.

RECOMMENDED TEAMS

Havoc core	Xuanling + Chisa + Suisui
Glacio core	Hiyuki + Lynae + Suisui
Flare core	Hsin + Electro Rover + Suisui; Rover is outside your list

ECHO BUILD

5-piece Song of Feathered Trace + Forbidden Bastion.
Rejuvenating Glow + Fallacy is a practical existing-set alternative.

Costs	4-3-3-1-1
4-cost	HP% or Healing Bonus for comfort; Crit DMG for personal damage
3-costs	Energy Regen + Energy Regen
1-costs	HP% + HP%
ER target	260% total for her buff scaling. Do not chase Crit before this.
Substats	Energy Regen → HP% for sustain; Crit DMG is optional damage polish

PLAY PATTERN

Intro → Drizzle Skill / attacks → build Floral Epistle → Liberation → Outro to hybrid → hybrid Outro to the carry after the relay becomes available.

Must know. At 600 Floral Epistle, the first Plume Step enables her relay to the next carry. An excessively early second handoff can miss it. The carry must meet the negative-status consumption condition for the associated ATK effect.

For your roster: Suisui and Xuanling can use the same set family with completely different main stats. Do not put Xuanling’s ATK pieces on your HP healer.

Build, priorities and kit references: [\[16P\]](#) [\[16W\]](#) • [Sourcebook](#)

TALENT LEVEL-UP ORDER

- 01 Intro Skill
- 02 Forte Circuit
- 03 Resonance Skill
- 04 Resonance Liberation
- 05 Basic Attack

This is damage order. For practical healing, invest in Skill and the healing portions of her kit first; her personal damage is low.

WEAPONS

Signature: Firstlight’s Herald. Practical alternative: Variation.

FUSION / SWORD

Changli

Skill-damage quickswap DPS / hybrid

A technical option, not the automatic best teammate for every Fusion carry.

RECOMMENDED TEAMS

- From your requested roster
- Changli + Aemeath + Verina; advanced quickswap option
- Outside-roster premium core
- Changli + Brant + Lupa, or Aemeath + Changli + Lupa

ECHO BUILD

5-piece Molten Rift. Active Echo: Nightmare: Inferno Rider, not the ordinary version.

Costs	4-3-3-1-1
4-cost	Crit Rate or Crit DMG
3-costs	Fusion DMG + ATK%; double Fusion also viable
1-costs	ATK% + ATK%
ER target	Roughly 110-120%; rotation length changes the requirement.
Substats	Energy Regen to target → Crit → ATK% → Skill DMG

TALENT LEVEL-UP ORDER

- 01 Resonance Skill
- 02 Forte Circuit
- 03 Resonance Liberation
- 04 Basic Attack
- 05 Intro Skill

Skill and Forte first, then Liberation. “Heavy” input does not make Heavy Attack bonuses her default damage stat.

WEAPONS

Signature: Blazing Brilliance. Strong permanent alternative: Emerald of Genesis.

PLAY PATTERN

Use True Sight follow-ups to reach four Enflament → Flaming Sacrifice Heavy → Liberation to refill four stacks → another Flaming Sacrifice → appropriate Outro.

Must know. Spend existing Enflament before Liberation when the route allows, rather than wasting its refill. Quickswapping can reduce animation time, but careless swaps lose the recipient’s short Outro window.

For your roster: Keep her as an enjoyable advanced option. Your specialist Aemeath teams are the easier baseline to finish before optimizing a Changli quickswap rotation.

Build, priorities and kit references: [\[17P\]](#) [\[17W\]](#) • [Sourcebook](#)

SPECTRO / RECTIFIER

Verina

ATK-scaling healer / flexible team buffer

A low-cost way to keep a fourth team functional without sharing Shorekeeper.

RECOMMENDED TEAMS

Your no-overlap option	Lucy + Rebecca + Verina
Quickswap option	Aemeath + Changli + Verina
General fallback	Use when the preferred healer is assigned elsewhere; expect different buff coverage

ECHO BUILD

5-piece Rejuvenating Glow + Fallacy of No Return. Bell-Borne Geochelone is a defensive alternative.

Costs	4-3-3-1-1
4-cost	Healing Bonus; ATK% is a healing alternative
3-costs	Energy Regen + Energy Regen
1-costs	ATK% + ATK%
ER target	About 220-230% for short loops; longer rotations can need less.
Substats	Energy Regen → ATK% → flat ATK; damage stats are optional

TALENT LEVEL-UP ORDER

- 01

Forte Circuit
- 02

Resonance Liberation
- 03

Resonance Skill
- 04

Basic Attack
- 05

Intro Skill
- Unlock both Inherent Skills. Level Forte and Liberation for useful healing, then stop when sustain is sufficient.

WEAPONS

Variation is the practical go-to. A dedicated limited weapon is not required for this role.

PLAY PATTERN

Skill and Liberation → jump and spend Forte stacks through aerial attacks → Echo → Outro. Add attacks if your weapon rank leaves Concerto short.

Must know. Her healing scales with ATK, unlike Shorekeeper and Suisui. A high-HP healer loadout is therefore the wrong template. She also does not require Shorekeeper's two-Intro field upgrade sequence.

For your roster: Do not overinvest in her personal damage while your carry's key talents or weapon are unfinished. Reliable healing and fast handoffs are the goal.

Build, priorities and kit references: [\[18P\]](#) [\[18W\]](#) • [Sourcebook](#)

Shorekeeper → Iuno → Jingran

S0 teaching loop. Learn the resource conditions before adding animation cancels.

1

SHOREKEEPER

Prepare the field and the first Intro.

Build Concerto with Basics, Heavy and Skill. Cast Liberation, then Fallacy near the handoff. Outro to Iuno. The opening rotation needs more attacks than later loops with Shorekeeper's enhanced Intro.

2

IUNO

Create Full Moon and hand the buff directly to Jingran.

Intro → Echo → Closing Refrain (Skill) → Liberation → jump into Moonbow → first bow Skill → bow Basics 1-3 → second bow Skill → Absolute Fullness at full Concerto → Outro to Jingran.

3

JINGRAN

Spend the four empowered Heavy opportunities.

Intro → Echo → Liberation → Forte Heavy → Skill and its held-Basic follow-up → Forte Heavy → Skill and follow-up → Forte Heavy → Basic chain to refill Qi → fourth Forte Heavy → Outro. Use Tune Break when available without losing the damage window.

Teaching sequence adapted from the published team rotation [\[R1\]](#); character mechanics: [\[01P\]](#) [\[08P\]](#) [\[11P\]](#)

FOUR CHECKS WHEN THE LOOP FEELS WRONG

No full buffs? Confirm the two team Intros upgraded Shorekeeper's field and that Iuno actually created Full Moon.

Iuno S2 not active? Jingran must gain shields repeatedly inside the domain and reach ten Blessing stacks; it is not automatic on entry.

Jingran damage looks low? Check HP, Fire of Life from Liberation, Qi for the Heavy finishers and whether a swap ended his buffs.

Second rotation stalls? Add ER or missing resource-building attacks. Do not "fix" the first rotation by ignoring the second.

Learning route only: weapon ranks, sequences and enemy movement can change the optimal loop.

Build the whole team first.

These checkpoints matter more than a universal ranking of who deserves every last material.

- FIRST

Finish your active cores.

For the teams discussed, prioritize Jingran / luno and Lucy S2 / Rebecca. Finish the carries' levels, weapons and key talents; then improve the hybrids' meaningful personal damage.
- NEXT

Meet the support thresholds.

Shorekeeper, Mornye and Suisui need their effective ER targets and adequate healing before damage polish. Level 90 alone does not increase their fixed buff percentages.
- THEN

Add another complete archetype.

Choose Qingxiao, Luuk, Hiyuki, Aemeath or Hsin based on the team you will actually field. Denia's preset and contested supports are part of that decision.

STAT CHECKPOINTS TO SAVE WITH YOUR PRESETS

Character / role	Working ER target	Extra check
Jingran	~120%	Work toward 50,000 HP; 4-4-1-1-1
luno hybrid	120-130%	Full Concerto for Absolute Fullness
Lynae / Rebecca	115-130% / ~120-130%	Direct Outro to the intended carry
Denia	~120% Fusion / ~125% Tune	Matching mode AND Echo set
Qingxiao / Luuk	~115-120% / ~125-130%	Keep the Tune Strain support core
Hiyuki / Xuanling	~120% / ~110-120%	Include temporary set Crit Rate
Lucy / Chisa	~125% / ~125%	Both use offensive Echo stats
Aemeath / Hsin	~115-125% / ~115-120%	Correct mode and support package
Shorekeeper	250% effective	Usually 230% before Echo + passive
Mornye	260% effective	Usually 240% before Echo + passive
Suisui	260%	Floral Epistle and relay timing
Changli / Verina	~110-120% / ~220-230%	Quickswap execution / healing uptime

Targets synthesize the linked character guides and add a small practical margin where appropriate. Lower ER can work in tested routes; do not cut it until your own second rotation is reliable. See each character's references.

How disagreements were handled

Prydwen’s role-specific priorities are the default for damage. Healing-first recommendations are labeled separately. ER estimates differ because rotations and teammates differ; the report uses practical starting ranges rather than pretending one number is exact for every account.

Arab Wuwa — Jingran / Luno / Shorekeeper team 161

The report uses its action sequence as a teaching aid, not its damage total as a promise. No cross-team DPS ranking is inferred from unmatched rotation windows.

Scope and limitations

This is an independent guide, not an official Kuro Games publication. “Checked” does not mean every linked calculation was newly recomputed. Recommendations can change with releases, enemy conditions and player execution. Signature alternatives are examples, not an exhaustive weapon ranking.
